

High-Speed Printing System

Application Profile

Compact, Accurate and Repeatable, LoPro® Easily Adapts to Print Technology

Challenge

The customer needed a slide system to move a print head into printing position. The slide system had to be both accurate and repeatable. In addition, it had to be compact, durable, and cost effective.

Application Description

Digital Print, Inc. manufactures high-speed electronic variable data printing systems to print sequential bar codes, sequential numbers, jumbo numbers, highly variable text, and graphics on tickets, tags, labels, statements, forms and direct mail.

Solution

The undriven LoPro solved the problem. The size 2 was compact and the wiper wheel plate gave a nicer look which was easily adapted to the print head. The LoPro system proved to be the best and most cost effective solution for the application.

Products Used

Undriven LoPro® with wiper wheel plate
