FOOD PROCESSING

A CUT ABOVE THE REST

Motion systems which reduce total cost of ownership for high speed food processing.

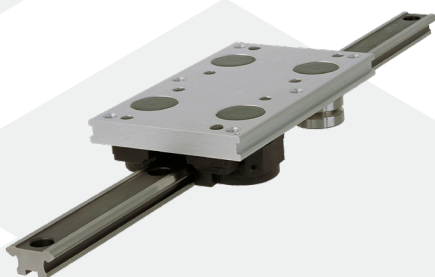

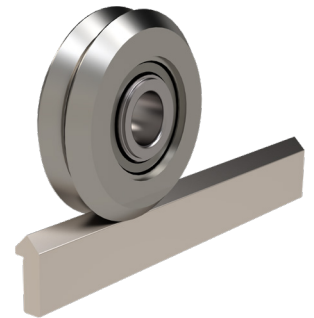

For more than 70 years, Bishop-Wisecarver has created innovative solutions for tough mechanical engineering challenges. Our high quality linear, rotary, and track circuit systems are proven to excel in food processing automation.

Additionally, Bishop-Wisecarver's expert engineers help design custom motion systems that provide differentiating features in your equipment.

Stainless steel construction, food-grade lubrication, and sealed wheels with washdown-resistant options ensure hygienic food processing.

DualVee® and HepcoMotion® GV3 systems provide high speed, high acceleration, and high reliability guided motion.

Self-cleaning vee guide wheel technology wipes away food scraps and other debris – especially well-suited for cutting operations and those requiring reliable uptime.
